How to Build a 13-Agent AI Operating System

Mission Control — live agent dashboard

eyshtech.vip | By Eysha Penrod

The Problem

You built a business. Now it's running you. Every week you spend 15-20 hours on operations that have nothing to do with serving clients — follow-ups, invoices, compliance checks, lead tracking, security audits. You're the human bottleneck in your own company.

I know because I was you. 6 years managing Google Workspace for 250+ SMBs at MarketStar. I watched the same pattern everywhere: smart operators drowning in admin work that should run itself.

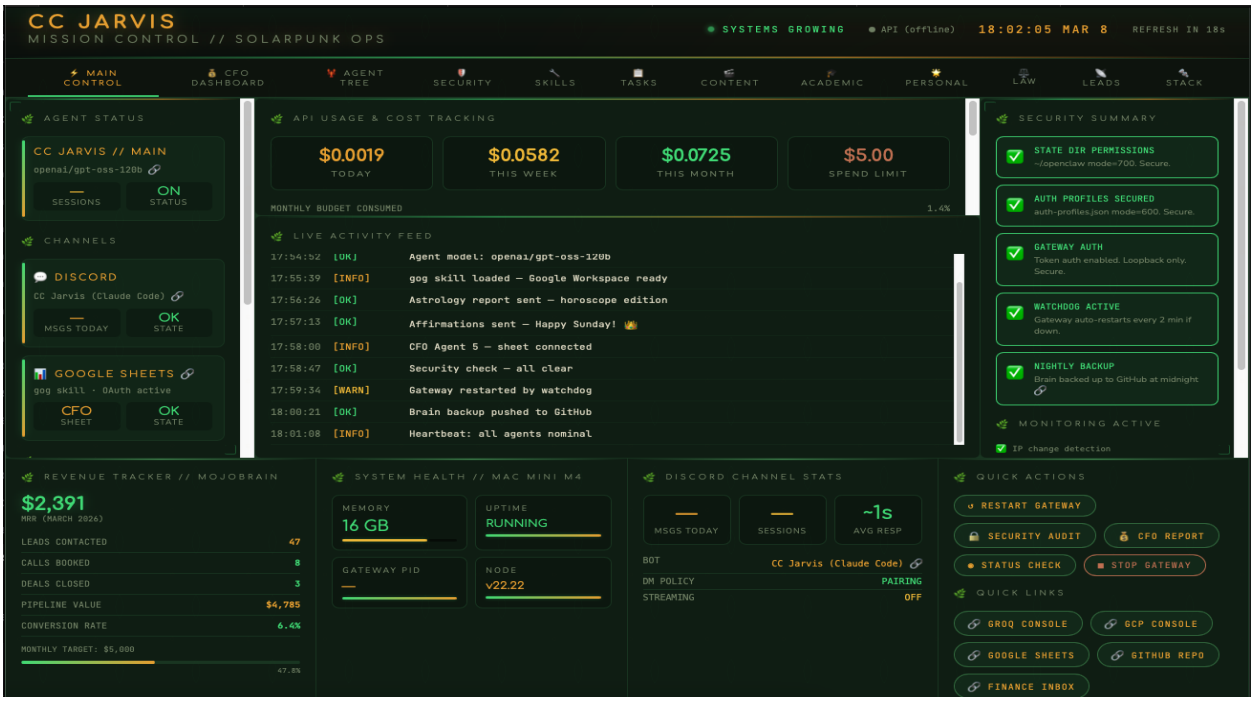
> **KEY INSIGHT:**
> 15-20 hours/week on ops × $100/hr opportunity cost
> = $6,000-8,000/month in lost revenue.
> MojoBrain costs ~$5-20/mo in API fees to run.

So I built MojoBrain — 13 autonomous AI agents that handle lead gen, outreach, compliance, content, finances, and security. Running 24/7 on a single Mac Mini. I approve from my phone every morning. The agents handle the rest.

The Architecture

MojoBrain runs as a collection of Python scripts on cron schedules. Each agent writes to a JSON state file. The Nerve Center reads all agent outputs every 5 minutes, builds a unified view, and routes cross-agent events. You get notifications via Discord.

MISSION CONTROL — LIVE VIEW OF ALL 13 AGENTS



Real-time agent status, financial tracking, security alerts, and system health. One screen.

```
Eysh (Discord + Phone)
    → CC Jarvis (Orchestrator)
    → Reads nerve-center-state.json
    → Acts: runs agents, sends Discord

  13 Agents (cron-driven)
    → Each writes to state files
    → Each reports to dashboard
    → Nerve Center coordinates

  All agents → dashboard.html
  Notifications → Discord (18 channels)
```

The 7 Core Agents

Each agent runs autonomously. No babysitting required.

Orchestrator
CENTRAL INTELLIGENCE

Reads all agent outputs, makes decisions, routes events. The brain that connects everything.

CSO
SECURITY

Breach monitoring, SSL tracking, anomaly detection, automated incident reports.

Lead Engine
LEAD GENERATION

Domain validation, email scoring, outreach sequences, CRM pipeline management.

Nerve Center
COORDINATION

Reads all agent outputs every 5 min. Builds unified state, detects cross-agent patterns.

CFO
FINANCE

Monthly burn tracking, subscription monitoring, suspicious charge flagging, tax awareness.

CTO
INFRASTRUCTURE

System health monitoring, disk space, cron validation, automated recovery protocols.

Law
COMPLIANCE

GDPR/CCPA scanning, disclaimer database, contract clauses, compliance routing.

CC Jarvis deployments include 13+ agents tailored to your business.

The Stack

Everything runs on commodity hardware. No cloud lock-in.

~$20
Monthly API Cost

13
Autonomous Agents

24/7
Unattended Operation

Component	Technology	Cost
Hardware	Mac Mini M4 / Linux / VM	$0 (use what you have)
LLM Provider	Your choice (Claude, GPT, Groq, etc.)	$5-20/mo API
Orchestration	Python 3 + cron	$0
Dashboard	Self-contained HTML	$0
Notifications	Discord webhooks	$0
Email	Brevo (5K emails/mo)	$9/mo
Domain	Namecheap	$7/yr
Hosting	GitHub Pages (website)	$0

How I Got Here

MojoBrain didn't start as a product. It started as survival. I was running a consulting business while employed full-time, managing 13 different tools manually, and losing leads because I couldn't follow up fast enough.

> **KEY INSIGHT:**
> The first agent I built was the Lead Engine.
> Night one, it scraped and scored 47 leads while I slept.
> That one agent replaced 15 hours of manual prospecting per week.

Within 2 weeks I had 7 agents running. Within a month, 13. The system evolved from a collection of scripts into a coordinated operating system with a central nervous system, a dashboard, and autonomous decision-making.

> **KEY INSIGHT:**
> The breakthrough wasn't any single agent.
> It was the Nerve Center — the component that reads ALL agent outputs
> every 5 minutes and coordinates cross-agent responses.
> That's when it stopped being scripts and became a system.

3 Agents You Can Build This Weekend

01 System Health Monitor

A simple Python script that checks disk space, memory usage, and cron job health every 15 minutes. Sends a Discord webhook if anything is wrong. Takes 30 minutes to build.

```
Stack: Python + psutil + Discord webhook
```

02 Morning Briefing Bot

Aggregates data from your tools (email count, calendar events, task list) and sends you a formatted summary at 7am via Discord or email. Your personal chief of staff.

```
Stack: Python + cron + API calls
```

03 Lead Scraper + Scorer

Searches for businesses matching your ICP, validates their domains, and scores them on signals like hiring posts, tech stack, and company size. Outputs a ranked CSV every morning.

```
Stack: Python + DuckDuckGo + DNS checks
```

Ready to Stop Being the Bottleneck?

Tier	Price	What You Get
Playbook	$297	7 agent scripts + dashboard + deployment playbook
Guided Setup	$797	Everything above + 2hr live call + 30 days support
Managed Deploy	$1,497	Full installation + 90 days support + 3 custom agents

Or start with a $97 Workspace Audit — 30 minutes, actionable recommendations, and the $97 applies as credit toward any MojoBrain tier.

KEY INSIGHT:

Currently onboarding 3 clients per month.

About EyshTech

I'm Eysh. I spent 6 years as a Google Workspace Sr. Account Manager at MarketStar, managing environments for 250+ SMBs. I know exactly where operations break down — and I built MojoBrain to fix it.

MojoBrain runs in production daily, managing my own business operations. 13 agents, one Mac Mini, zero downtime. I sell the same system I depend on.
